

Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	03 October 2026
Team ID	SWTID-2026-4647
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Technical Architecture:

The Auto Ticket Classification system is designed as a cloud-hosted, no-code workflow solution built on ServiceNow. Its architecture ensures scalability, maintainability, and real-time automation of IT helpdesk ticket classification. The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Table1:Components and core technologies:

Component	Description	Technology
User Interface	Ticket submission form	ServiceNow Web UI
Application Logic-1	Keyword-based classification	ServiceNow Flow Designer
Application Logic-2	Dependency mapping (Category ↔ Subcategory)	ServiceNow Dictionary Config
Database	Incident Workflow custom table	ServiceNow Tables
File Storage	Ticket attachments	ServiceNow File Storage
External API	Email notifications	ServiceNow Notification API
Infrastructure	Deployment	ServiceNow Cloud

Table-2: Application Characteristics:

Characteristic	Description	Technology
Open-Source Frameworks	Not applicable (ServiceNow proprietary)	–
Security Implementations	Role-based ACLs, IAM controls	ServiceNow ACLs
Scalable Architecture	Modular Flow Designer rules	ServiceNow
Availability	Cloud-hosted, always-on	ServiceNow SaaS
