

Project Design Phase
Proposed Solution Template

Date	03 October 2026
Team ID	SWTID-2026-4647
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The school IT helpdesk receives multiple incident requests daily (Wi-Fi issues, projector failures, password problems, slow computers). Currently, IT staff manually review and classify each ticket, which is time-consuming, error-prone, and inefficient as request volume increases.
2.	Idea / Solution description	Implement an automated ticket classification system using ServiceNow Flow Designer . The system analyzes keywords in the short description and automatically assigns the correct Category and Subcategory. A custom Incident Workflow table stores structured ticket records, and automated email notifications are sent to the caller.
3.	Novelty / Uniqueness	- Entirely no-code automation using Flow Designer. - Keyword-based classification ensures consistency. - Dynamic dependency mapping between Category and Subcategory. - Easy to maintain and extend without developer intervention.
4.	Social Impact / Customer Satisfaction	- Faster ticket resolution improves student and teacher satisfaction. - Reduces workload for IT staff, allowing them to focus on solving issues instead of repetitive classification. - Builds trust in IT services by eliminating delays and errors.
5.	Business Model (Revenue Model)	While primarily designed for internal school IT operations, the solution can be adapted for other organizations. Potential revenue streams include: - Licensing the workflow template to other institutions. - Consulting services for customization and deployment. - Subscription model for managed IT automation services.
6.	Scalability of the Solution	- Easily extendable to new categories/subcategories by updating Flow Designer rules. - Can integrate with external APIs (e.g., SMS notifications, chatbot interfaces). - Scales across multiple departments or institutions using the same ServiceNow platform.
