

Planning Logic

Date	03 October 2026
Team ID	SWTID-2026-4647
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	5 Marks

1. Ticket Submission

- Students or teachers submit a ticket by entering their **name** and a **short description** of the issue.
- No manual selection of category or subcategory is required.

2. Flow Designer Automation

- A trigger activates when a new ticket is created.
- The system scans the short description for predefined keywords.
- Based on keyword detection, the system automatically assigns the correct **Category** and **Subcategory**.

3. Keyword Mapping Logic

- **Wi-Fi / Network** → Category: *Network*, Subcategory: *Wi-Fi*
- **Projector** → Category: *Hardware*, Subcategory: *Projector*
- **Password / Login** → Category: *Access*, Subcategory: *Forgot Password*
- **Slow / Hanging** → Category: *Performance*, Subcategory: *Slow Computer*

4. Data Storage

- Classified tickets are stored in a custom **Incident Workflow table** with fields such as Caller, Category, Subcategory, State, Assigned Group, and Assigned To.

5. Notification

- An automated **email confirmation** is sent to the caller, ensuring transparency and acknowledgment of ticket creation.

Benefits

- **Consistency:** Eliminates human error in ticket classification.
- **Efficiency:** Reduces manual workload for IT staff.
- **Scalability:** Easily extendable to new categories and subcategories.
- **Performance:** Real-time classification ensures immediate routing.
- **User Satisfaction:** Faster ticket handling builds trust in IT services.
